

COMMUNICATION MANAGER

Powered by DOCodile

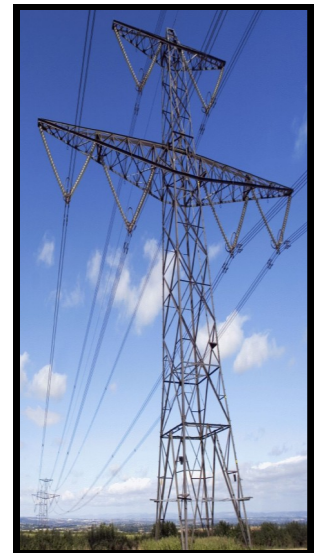

Designed for NERC Compliance!

BENEFITS

- **Use with existing Compliance Solutions**
- **Traceability**
- **Best Practices**
- **No More Lost Messages**
- **Reduce Error**
- **Ease of Use**

DOCodile Communication Manager (CM) system provided by Towerline Software, LCC. is your communication management solution for NERC Compliance. The DOCodile CM product allows you to track messages, electronic conversations, emails, and filing submissions, by automatically logging all messages and linking these to appropriate requirements.

Towerline Software's innovative products and services assist the communications and utility industries with NERC compliance, document management, RF safety, antenna site information, communication, drafting, design, project management and engineering demands.

WHAT COMPLIANCE MANAGERS ARE SAYING

"With DOCodile CM not only can we track our communications, it will associate them with the appropriate requirements. This system is intuitive and fast."

COMMUNICATION MANAGER

- Automates your conversations/communications and links them to requirements.
- Creates an easy-to-read audit trail of your compliance communication records.
- Works with Microsoft Outlook.
- Automatically checks for new messages.
- Can generate a message and upload a file, attach a form, or associate the message with applicable requirements.
- Stores and organizes sent and received Docodile CM messages from sources both internal and external to your company.
- Can insist on a message acknowledgement from the recipient and record the read receipts.
- Will display your message automatically on recipient's computer.

USE DOCODILE CM FOR...

- Daily communications between operators, supervisors, engineers, and SME's.
- Distribution of required documents externally and/or internally.
- Emergency communications system; for example change in transmission or generation status, rating, or capabilities.
- Responding to a request from a balancing authority, transmission service provider, RRO or any other registered function entity.
- Coordination and planning of tests, outages, maintenance, or abnormal operations.
